DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 20-22, 25-27,29 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ishibashi (U.S. Patent No. 6,558,051 B1).

Ishibashi shows a camera indicated by reference numeral 1 in Fig. 1; a plurality of physiological sensors by reference numerals 8, 4 and 13-16 in Fig. 2; and a controller causing the camera to capture an image based on the detected physiological responses by reference numeral 5 in Fig. 2. In particular note column 6 lines 6-12. Thus, claims 20, 21 are fully met by Ishibashi. Note that steps 120, 125, 130, 135, 140, 145, 155, 160, 165 take different routes according to the detected excitement level of the camera wearer. Thus, claim 22 is met by Ishibashi. Note that in column 6 lines 6-12, the low power consumption mode is disclosed as a non-shooting mode. Thus, an image is captured only when the camera wearer is in a higher excitement level and the camera is switched to the high power consumption mode. Thus, claims 25-27,29 are fully met by Ishibashi.

Allowable Subject Matter

3. Claims 1-3,5-19,23,24,28,30,31,36-47 are allowed. The primary reason for allowance of claims 1,12,15,17 is the claim limitation for a plurality of sensors positioned adjacent to an eye

of a user to detect a plurality of different involuntary physiological responses occurring within a particular time period to trigger an electronic device to perform a particular task. The primary reason for allowance of claims 2,3,5-9,18,19 is the claim limitation for a plurality of sensors positioned adjacent to an eye of a user to detect a plurality of different involuntary physiological responses and to transmit these signals to a controller to determine a value of excitement level and controlling an electronic device based on the determined excitement level. The primary reason for allowance of claims 10,11,14 is the claim limitation for a sensor positioned adjacent to an eye detecting a physiological response having a switch that is positioned within a path of movement of an eyelid. The primary reason for allowance of claims 13,16,23,24,28 is the claim limitation for a contact lens with a physiological response sensor generating an output that controls a camera. The primary reason for allowance of claims 36-38 and 42-44 is the claim limitation for a contact lens with a photodetector that controls an electronic device according to the amount of pupil dilation. The primary reason for allowance of claims 39-41 and 45-48 is the claim limitation for a contact lens with a photodetector detecting the blink of an eye to control an electronic device.
